

WolfBench Exp12: canonical harmful-agent scaling

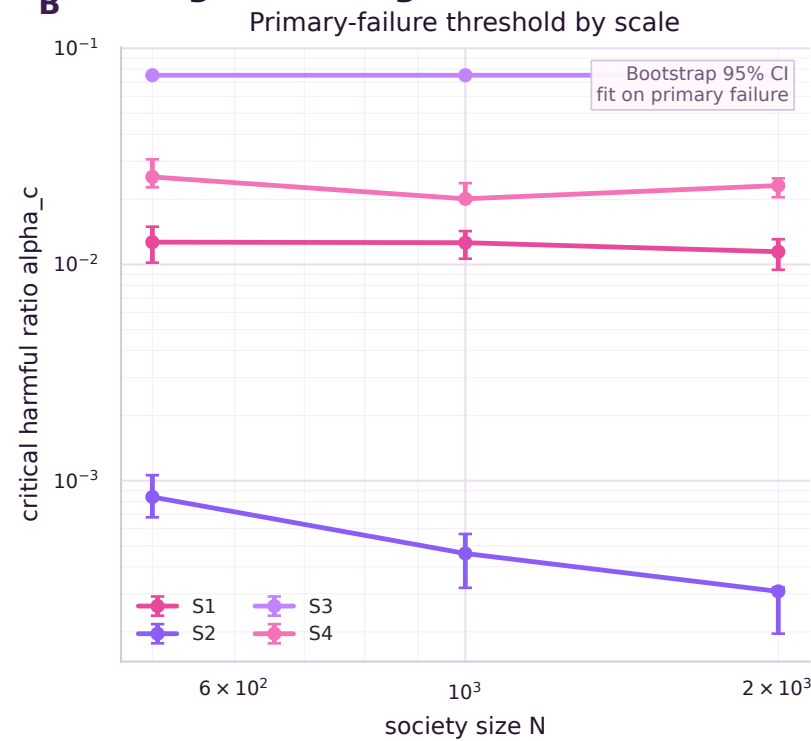

A

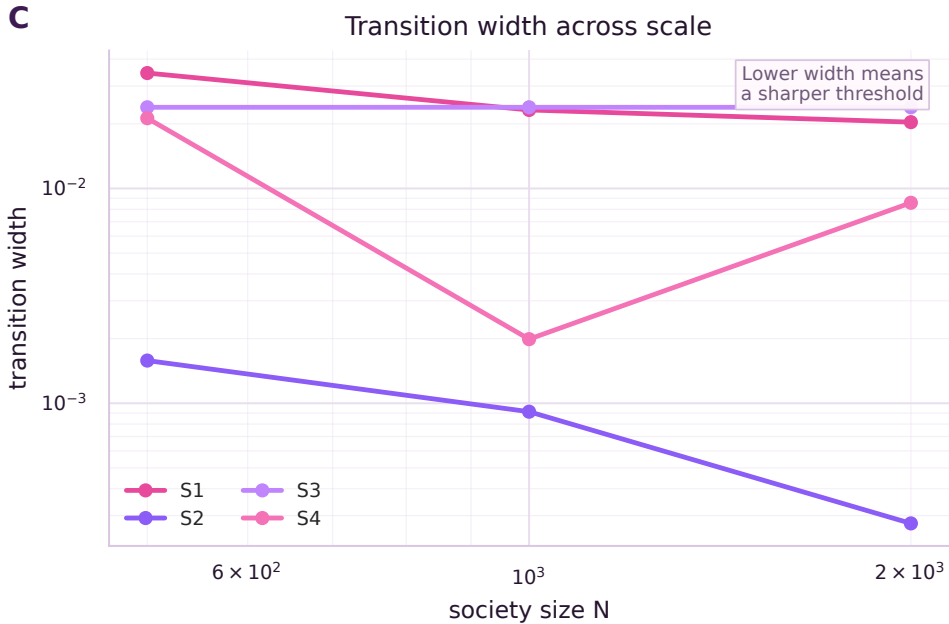

P(primary failure)

B

C

D

Evidence summary

Scenario	Primary metric	alpha_c@n	width@n	Evidence
S1	generic collapse	0.011	0.020	strong
S2	generic collapse	0.0003	0.0003	strong
S3	spoofer/liquidity	0.075	0.024	partial
S4	fake liquidity	0.023	0.0086	mechanism-strong
